CONNECTIVE LEAN STORAGE SOLUTION

Introducing - The Cubus - The right material, at the right time in the right location.

LINE SOLUTION

CELL SOLUTION

expandability.

- Storage capacity from 612 to 1540 8mm reels
- Two sizes system, unlimited expandability

productivity.

- Reduces logistic problems by 95%
- SMD reels of all sizes, trays, boxes & more

accuracy.

- Full traceability of all stored items
- Software control for MSD components

roi. return on investment

- Lowest ROI of any production system
- Configure – Operate – Integrate!

flexibility.

- User reconfiguration backed by auto-mapping
- Unique intuitive eStorage software

integration.

- Full interface to most production systems and all major ERP and material management

With Cubus, the next generation storage solution, users can reconfigure the internal layout of the system at any time to adapt to individual, up-to-date needs. The unique Cubus software, eStorage, allows users to map and recalibrate the new layout in less than 20 minutes. The small system footprint of the Cubus, makes the system one of the most compact, yet efficient, flexible storage solutions.

The Cubus can be used as total automated SMD storage solution for small to mid-size companies as well as automated material replenishment units for high to super high speed lines. According to studies over 60% of production line stops comes from logistics issues; the correct material is not in the right place when required. Cubus will reduce this stoppage time by 95%.

The eStorage software for Cubus offers a user-friendly MMI that secures fast, error-free operating capability. All standard operations, including full track and trace of consumption and inventory levels, are only few clicks away. MSD control is also included. eStorage guarantees the right material, at the right time in the right location.

eStorage, with the strategical partner Cogiscan, the product CO-Nect and the eStorage standard interface, process integration is easy. Over a world wide recognized middleware backbone system Cubus can be integrated into all Essemtec pick-and-place and dispensing solutions as well as any other production equipment from 3rd party vendors. Connection to ERP, SAP, main stock or custom solutions are also possible.

optional.

- Language code
- Air dry unit
- Temperature and humidity measurement
- Individual stack configuration
- Trays, boxes, spindles and much more
